Press Release

For Immediate Release

Tunstall Supports OTs

Occupational therapists provide so much help and support to the community, advising what funding and products are available to assist people with special or ongoing needs.

Navigating through funding and service providers can be quite a challenge; and that's before even starting the search for products to suit clients with special or unique needs.

Tunstall Healthcare, the world's leading provider of telehealthcare offers a range of assistive technology solutions to ensure that their client is safe and quickly able to get assistance while they are in their own home.

To assist occupational therapists to find the right product, Tunstall will listen to the patient's needs and recommend the appropriate products to keep the client safe and supported.

This may be solutions for a young child with epilepsy, a twenty year old living with paralysis, a 50 year old managing chronic illness or an older person coping with osteoporosis.

Tunstall also provides a range of products that can be interfaced to quickly and easily create a solution to help.

The Bellman & Symfon range includes pagers, beacon flash receivers, portable receivers and contact detectors that can be synced with each other and Tunstall products to create activity sensors that notify onsite carers that their client or loved one needs assistance.

For example, the Bellman & Symfon bed shaker can wake a sleeping carer to alert them that the Tunstall epilepsy sensor has been activated.

Similarly, the Bellman & Symfon pager can notify a carer that one of a number of Tunstall sensors have been activated, such as the fall detector, enuresis sensor or property exit sensor.

If Tunstall does not have a suitable product, the onsite technicians will create a custom solution to suit the individual's needs.

Examples of solutions that have been created for Tunstall's clients include the mobile pressure mat, pneumatic switch and tapper switch.

The mobile pressure mat detects pressure and can be moved around the home to notify the carer that their loved one has gotten out of bed or is getting up from their chair.

The pneumatic switch is ideal for people with limited strength and requires very light touch to call an offsite response centre for assistance.

The tapper switch allows clients with limited movement to tap the switch with their chin to activate an alarm call for assistance.

Tunstall features a range of its products at www.tunstallhealthcare.com.au but welcomes occupational therapists to call 1300 760 333 to discuss a solution for their client.
