## Press Release

### For Immediate Release

#### **Title: Tunstall Launches into Telehealth**

Announced at the Successes & Failures in Telehealth 2009 conference, Tunstall Healthcare introduced the market to the two new RTX telehealth systems, and the unique clinical software 'Tunstall Connect'.

Catering to Australia's changing communication channels and the remote community, the Tunstall RTX3370 uses the traditional land line telephone whilst the RTX3371 uses the mobile network (GSM).

The new Tunstall RTX3370 and RTX3371 allow patients living with long term conditions such as congestive heart failure (CHF), chronic obstructive pulmonary disease (COPD), diabetes and hypertension to effectively manage their condition from home.

Designed to be extremely patient friendly, the new RTX monitors feature a large colour screen, large soft easy press buttons and compatibility with a wide range of wired and wireless (blue tooth or infrared) medical devices.

This includes scales, blood pressure monitors, blood glucose meters, peak flow meters, blood oxygen monitors and more.

At a preset time each day, the RTX monitor reminds the patient to take their vital signs; visually and audibly prompting them through the process.

The RTX then asks a series of health related questions, intelligently asking additional questions based on the answer provided.

The RTX transmits the collected data to the Tunstall clinical software 'Tunstall Connect' where it is monitored and reviewed by the patient's healthcare team.

The collected data is compared to preset parameters for the patient, alerting the healthcare team of abnormal readings. Additionally, the answer to the questions asked provides the monitoring clinician with personalised and detailed feedback.

This allows issues to be quickly identified and appropriate action to be taken.

The Tunstall RTX3370 and RTX3371 allow patient's health to be effectively managed from their own home, patients to be prioritised on a needs basis, issues to be quickly identified, intervention to occur and patients to be more involved in their own health management.

Tunstall has also released a new telehealth solutions sheet, offering information on the two RTX systems and the clinical software 'Tunstall Connect'.

For more information on the Tunstall RTX and Tunstall Connect software call 1800 611 528 or to download a copy of the new solution sheet visit
