Press Release

For Immediate Release

Title: Providing a Safer Sleep at Night

Tunstall's bed occupancy sensor is a versatile device that can be customised and used by patients and carers alike to offer independence, support and additional care.

Specifically designed to monitor a person's safety at any time of the day or night, this solution reduces the risks to an individual by raising an alert to Tunstall's 24 hour response centre, where a trained operator can organise the most appropriate response or action.

The sensor is placed under the mattress and is able to detect if the user has not gone to bed by a predetermined time, has not returned to bed during the night within a set time frame, or has not gotten out of bed in the morning, all suggesting that the user may need assistance.

Tunstall's bed occupancy sensor can also be connected to a light that dims on and off when the user gets in and out of bed.

The light can assist to reduce falls from tripping on unseen objects or provide a visual reminder to people living with dementia to return to bed during the night.

Alternately, Tunstall's bed occupancy sensor can be interfaced with a carer's pager to notify them immediately when a special needs patient is getting out of bed and requires their assistance.

Tunstall's bed occupancy sensor is a versatile solution that aims to offer independence by providing support if and when it is needed.

To find out more about Tunstall's bed occupancy sensor visit www.tunstallhealthcare.com.au or call 1300 760 333.
